Voice Selector
Study

Dear teaching staff,

Voice Selector Study is an advanced table microphone that helps students focus during lessons. It has been specifically designed for classroom learning and works to increase students' concentration levels by reducing background noise and amplifying the teacher's speech.

We ask that you grant your student permission to use their Voice Selector Study and the accompanying earphones throughout your lessons to assist with their concentration. For the best results, it is also recommended that the student sits at the front of the classroom.

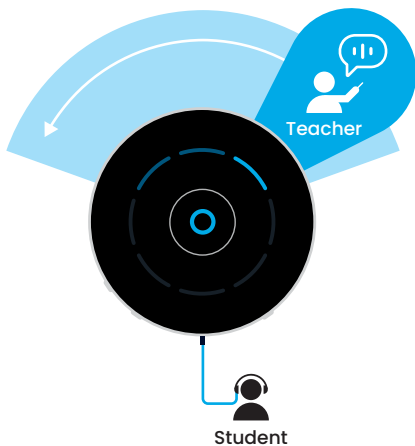

Please find further information about this ground-breaking device on the following pages.

**Thank you for your cooperation,
Ori Goren – CEO of Nuance Hearing**

Ori Goren

**Reduces background noise
& amplifies the teacher's speech**

Improved student
focus and attention

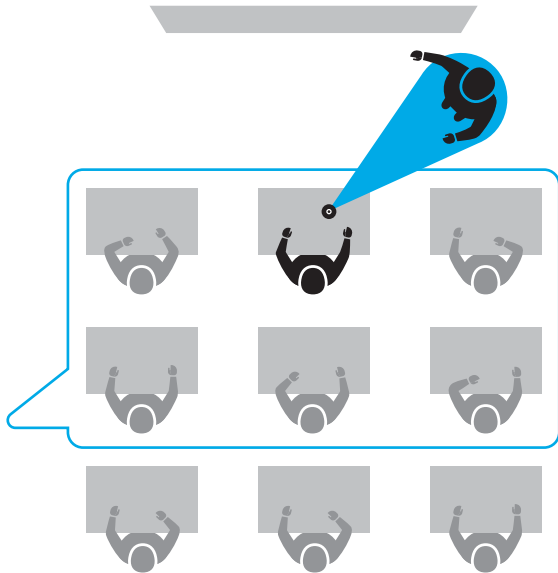

An improved
learning experience

Immediate effect

**Works best
when sitting
at the front
two rows**

Does not record
or collect data

Does not play music or
connect to other devices

Does not connect
to the Internet

**Clinically studied with
demonstrated benefit**

In 2020, a study was undertaken by Clalit Health Services (Israel's largest state-mandated health service organization) led by Prof. Iris Manor to evaluate the effectiveness of Voice Selector Study. It assessed the device's ability to improve the focus of adolescents struggling with Attention Deficit Hyperactive Disorder (ADHD) in the classroom.

The results of the study showed a highly significant improvement in the ability to focus on the teacher, to follow instructions and to ignore auditory distractions.
